Preferences

Preferences Panel

The dashboard preferences pane is displayed by clicking on "Preferences" in the drop down menu actived by clicking on the user name.

- Default Job Graph Expansion

  The job graph now supports a new display mode which displays the job graph in a collapsed format. The preferences for the job graph define the initial display mode when a task graph is first displayed. The two options are to fully expand all tasks, or to collapse all tasks down to the job node.

- Jobs Page Layout

  Selects a layout scheme for the jobs page. Currently their are two layouts, one where the job list uses the entire width of the browser window, and a second choice, where the task graph is located on the right-hand side of the job list.

- Job List Refresh Interval

  The Job List provides for an automatic reload of job data from the engine. The reload interval defines the time (in seconds) between automatic reloads of job data. The job reload is helpful when a filter is in use to keep the display more in sync with the filter.

- Blade List Refresh Interval

  Defines the time (in seconds) that the server list will be automatically refreshed from the engine.

- Show Log Indicator in Job Graph

  Controls the display of the visibility of the log indicator in the job graph.
