Blade Activity Pane

The Blade Activity pane displays a quick visual summary of the health of the blades.

- **Blade Activity Summary**

  The first section gives a quick numerical summary of the number of slots, number active, and number of unresponsive blades.

- **Graphic Activity Meter**

  A block is drawn for every blade (not every slot) in the farm. The block is color coded to show current status.

    - Green - Active
    - Gray - Inactive
    - Dark Grey - Non-responsive (The blade has not checked in for at least 6 minutes)

  Hovering the mouse over a block will display the name of that blade and its current status. Clicking on the block will select the block in the *Blade List* pane and bring up full information in the *Blade Info* pane.
