## PxrMix

Mixes two colors together according to the specified mix percentage. The mixed color result is calculated as: ( (1.0-mix) * color1) + (mix * color2).

## Input Parameters

## Color 1

The first color that is mixed with the second color.

## Color 2

The second color that is mixed with the first color.

## Mixer

The first color that is mixed with the second color.

## color1

color2
mix
result
mix $=0.0$
mix $=0.25$
mix $=0.5$
mix $=0.75$
mix $=1.0$

## Clamp Mixer

Keep the mix value between 0 and 1 to make sure you only get either color1 or color2 when outside of that range.

## Output Parameters

resultRGB
The clamped color result.
resultR
The R channel from the resultRGB output.
resultG
The $G$ channel from the resultRGB output.
resultB
The B channel from the resultRGB output.
